

Keysight Technologies

Nemo Xynergy

Enterprise-Level Big Data Analysis for Wireless Operators

Nemo Xynergy is a powerful, scalable, and easy-to-use web-based platform for analyzing drive test, OSS, and subscriber data. It automates key tasks in the entire network management life cycle and supports multiple, disparate data sources and vendors for all major technologies, including HSPA+, VoLTE, LTE-A, LTE-M, and NB-IoT.

Unlocking Measurement Insights

True Enterprise Solution

The Nemo Xynergy platform from Keysight Technologies, Inc. is an extremely powerful, scalable, and easy-to-use web-based platform that provides you with deep insight into your customer's experience and the network performance of their wireless systems. Its multi-vendor, multi-technology, multi-data source capabilities bring significant operational efficiencies by providing a single enterprise solution for all of their organization's big data analytics needs.

The platform is complemented by a state-of-the-art, fully user-configurable business rules engine. This rules engine can be used to drive in-depth rules, logic, and automation allowing Nemo Xynergy to rapidly identify problems through correlated analytics across all available data sources and produce actionable alerts, reports, dashboards, and customized key performance indicators (KPIs). No digging, no manual monitoring, no time in the field. Just accurate answers. Fast.

Highly Customizable

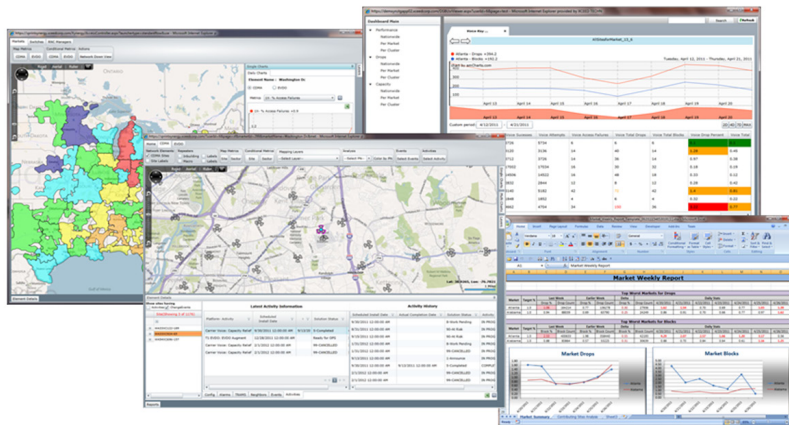

Nemo Xynergy is highly customizable providing you with the ability to implement customized KPIs and write rules to suit specific business requirements. With endless opportunities for customization, your enterprise has endless possibilities.

Nemo Xynergy is a middleware system that simply plugs into your current environment without disruption. It is remarkably easy to install, set up, and manage. Go from off-the-shelf to online, fast.

The platform's user-friendly, rich, and intuitive interface flattens the learning curve, speeding adoption and boosting utilization providing you with useful, actionable insight into network performance that yields better outcomes and real savings.

Software as a Service (SaaS)

Keysight's off-the-shelf SaaS cloud solutions help you efficiently manage networks with rich analytics without investing heavily in tools and infrastructure upfront. Keysight offers Nemo Xynergy on the web as SaaS offerings including drive test management, performance management, customer experience management, and more. Our state-of-the-art, fully redundant data center enables the tight management of quality, responsiveness, and support of the services offered. You can expect uninterrupted, high-performing web access suited to your needs with the flexibility of scaling up seamlessly as needs grow.

Features

Four modules

- Drive Test
- Network Management
- Small Cell/DAS
- Geospatial Intelligence

Support for

- Big data analytics
- Drive test data analysis
- Performance and configuration management
- Customer experience analysis
- Small cells analysis
- Capacity planning
- E911 call location accuracy audit

Maximize network resources

- Prioritize and align engineering tasks with available resources and company business goals
- Share data between different departments, anywhere across the globe

Capitalize expert know-how

- Standardize best practices throughout engineering teams

Improve operational efficiency

- Reduce mean time to repair
- Correlate network data from multiple sources
- Quickly identify the root cause of issues affecting network performance

Enhance customer experience

- Quickly identify and resolve system-impacting issues
- Maximize quality-of-service
