## **MODEL A10200**

## 20GHz 30dBm RF Signal Amplifier

Model A10200 is an ultra-small footprint, ultra wideband, high power amplifier designed for high frequency, high power, signal amplification. With an ultra high bandwidth of almost 20GHz and up to +28dBm power into 50 ohms, the A10200 is the ideal complimentary amplifier to any signal source that needs an extended power boost for demanding applications.

### **Enhancing Performance**

The A10200 was designed to extend the power range of the Tabor arbitrary waveform generators and RF signal generator for applications, requiring a higher output power to drive their DUT. Combined with the A10200 the Lucid series generators offer a solution for demanding applications requiring up to 20GHz signals at +25dBm into 50 ohms loads, without compromising signal integrity.

### **Cost Effective Versatile Solution**

While the A10200 was designed with the Tabor units in mind, it can be used as a standalone amplifier for any signal source. The A10200 offers a compatible, compact and cost-effective solution for extending any signal source's power performance.

#### **Target Applications**

Target applications for the A10200 are diverse and include various RF applications such as receiver testing, multi-tone testing, and general electronics and scientific applications. The new A10200 is an ideal solution for virtually any wide bandwidth application that requires high power and high frequency signal amplification.
